Discussions

Write a program to print the details of a student. The student's details consist of his/her name, age, CGPA, and grade.

Input Format

The input consists of one string, one integer, one float, and one character. The string corresponds to the name of a student. The integer corresponds to the age of a student. The float corresponds to the CGPA of a student. The character corresponds to the grade of a student.

Constraints

The CGPA (float value) should be printed with 2 decimal places.

Output Format

The output prints all the details of a student. Refer to the sample Output.
